

# Stellar Navigation Console or Galaxy Map

The Stellar Navigation Console, or the Galaxy Map on [Flight \(Helm\)](#) or [Science](#), is a view of the Galaxy that allows you to select other Star Systems to investigate and set waypoints to planetary bodies via the [System Map](#).

## Features

### LSG Toggle

In Flight and Sciences, the Galaxy Map has the LSG toggle in the bottom right, allowing you to switch between the [Local Radar](#), [System Map](#), and Galaxy Stellar Navigation.

### Zoom Slider

Also in Flight and Sciences, the Galaxy Map has a slider bar in the bottom right, allowing you to zoom in for more detail on star systems near you, or a wider view to see other star systems farther away.

## Location

In the upper left there is the current location of the Horizons, as Galaxy, System, and Planet.

## Color Coding

Some star systems will have a green or red area around them. These are to denote if the system is controlled by a friendly faction or an opposing faction (see [Factions](#)).
